

A scatter plot showing the distribution of 'Percent Change' for two categories: 'Wins' (blue dots) and 'Losses' (red dots). The x-axis is labeled 'Percent Change' and ranges from -0.02 to 0.03. The y-axis is unlabeled. The 'Wins' data points are clustered in two main groups: one centered around -0.01 and another around 0.01. The 'Losses' data points are more widely distributed, with a large cluster around -0.01 and another around 0.01. There is a significant overlap between the two groups in the central region.
