

A scatter plot showing the relationship between Wins (blue dots) and Losses (red dots) for 100 teams. The x-axis represents the proportion of wins, ranging from 0.0 to 1.0. The y-axis represents the proportion of losses, also ranging from 0.0 to 1.0. The plot is divided into two main horizontal bands of data points. The upper band, representing teams with higher win rates, shows a clear negative correlation: as the proportion of wins increases, the proportion of losses decreases. The lower band, representing teams with lower win rates, shows a positive correlation: as the proportion of wins increases, the proportion of losses also increases. A legend in the top-left corner identifies the blue dots as 'Wins' and the red dots as 'Losses'.
