

A scatter plot showing the relationship between Stochastic (14) on the x-axis and Stochastic (15) on the y-axis. The x-axis ranges from 0.0 to 1.0, and the y-axis ranges from 0.0 to 1.0. Data points are categorized into 'Wins' (blue dots) and 'Losses' (red dots). The plot shows a general positive correlation, with a dense cluster of points in the upper right quadrant (Stochastic (14) > 0.8, Stochastic (15) > 0.8). There is also a cluster of points in the lower left quadrant (Stochastic (14) < 0.2, Stochastic (15) < 0.2). The legend indicates that blue dots represent 'Wins' and red dots represent 'Losses'.
